Environmental Auditing Software Package.

AuditMASTER™ environmental auditing package assists environment managers and practitioners fulfil their due diligence and/or ISO 14001 auditing obligations.

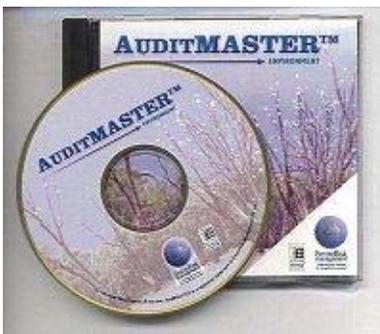

AuditMaster™ is a fully automated auditing package that simplifies the auditing process, drives consistency between auditors, provides professional reports and saves time.

Features include:

1. A comprehensive audit protocol (or checklist) with over 200 detailed questions prepared by Senior Auditors for a full Environmental Management (Systems, Risk and Compliance) Audit.
2. Easy to use “click and score” tools for recording audit findings, risk assessments and setting priorities.
3. Ready-to-use menus that capture standard recommendations for use on like sites.
4. Automated report writing including a graphical summary of the strengths and weaknesses, prioritised table of recommendations and full details of the audit findings and data gathered.

Discussions with users suggest there are many benefits over traditional auditing processes; particularly for corporations conducting audits of like sites.

The package has been trialled over the past year and has been instrumental in achieving ISO 14001 certification for several firms within the automotive and manufacturing industries.
